

copolymer of ethylene and at least one C₄-C₈ α -olefin; and (c) from 10 to 50 wt. % of a third polymer having a melting point of 60 to 110°C comprising a copolymer of ethylene with a vinyl ester, acrylic acid, methacrylic acid, or alkyl acrylate, wherein said first and second copolymers have a combined weight percentage of at least 50 weight percent, said weight percent being based upon the total weight of said first, second and third polymers;

a third layer comprising at least 80% by weight, based on said third layer's weight, of EVOH or at least one copolymer of vinylidene chloride with from 2 to 20 weight percent, based on said copolymer's weight, of vinyl chloride or methyl acrylate; and

 a fourth polymeric layer comprising (a) from 10 to 85 wt. % of a first copolymer of ethylene and at least one C₃-C₈ α -olefin, said first copolymer having a melting point of 55 to 98°C, (b) from 5 to 60 wt. % of a second copolymer of ethylene and at least one C₄-C₈ α -olefin, said second copolymer having a melting point of 115°C to 128°C, and (c) from 0 to 50 wt. % of a third copolymer having a melting point of 60 to 110°C of ethylene with a vinyl ester, acrylic acid, methacrylic acid, or alkyl acrylate, wherein said first and second copolymers have a combined weight percentage of at least 50 weight percent, said weight percent being based upon the total weight of said layer; and

wherein said film has a shrinkage value at 90°C of at least 40% in at least one of the machine and transverse directions, and said film has a tensile seal strength of at least 400 g/cm at 88°C.
